

Curriculum statement

Geography

KS3: Students follow a programme of study designed to generate interest and to engage students in a developing understanding of their connection and contribution to the world. It also aims to embed an understanding of geographical skills and the importance of geography in current affairs.

The curriculum offers a varied breadth of knowledge across human, physical and environmental geography which can be further built upon at KS4. It also creates opportunities to develop skills in data interpretation and map skills. Assessment is based upon the end of topic tests, which include an extended writing task that mirrors the GCSE nine mark questions.
